DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 20-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Ryder (Newly cited).

Ryder (U.S. Patent No. 4,868,487) discloses an apparatus in Figure 1 for performing frequency response analysis of a system under test to establish response coefficients at various frequencies.

With respect to the newly added claims 20-22, Ryder discloses a positive unity gain 113, a negative unity gain 114, and a switch 115 for multiplying a test signal 11 by +1 and -1 on alternating half clocks of a clock generated by a local or carrier oscillator 123, wherein the switch 115 is controlled by a control circuit 116 to produce a commutated waveform to a well known analog-to-digital converter or delta-sigma modulator 101 through a digital-to-analog converter 18. See col. 3, lines 6-16 and col. 4, lines 22-44.

Allowable Subject Matter

3. Claims 1-12 and 14-19 are allowed.
4. Claim 23 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: JP363094718A discloses a delta-sigma type analog-to-digital converter offset cancellation system to cancel the offset voltage by inverting the polarity of an output of the oversample delta-sigma type converter only at the period when a digital signal corresponding to a ground potential is to be outputted and inputting the result to a decimator filter. However, the prior art fails to show or suggest that a common conversion clock is used to control the polarity of every half clock cycle of the incoming waveform and a sigma-delta modulator for down converting the incoming waveform directly to a baseband frequency without needing to first down converting the incoming waveform to an intermediate frequency.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

Art Unit: 2634

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
